Share

Given a valid (IPv4) IP `address`, return a defanged version of that IP address.

A *defanged* IP address replaces every period `"."` with `"[.]"`.

### Example 1:

**Input:** `address = "1.1.1.1"`

**Output:** `"1[.]1[.]1[.]1"`

### Example 2:

**Input:** `address = "255.100.50.0"`

**Output:** `"255[.]100[.]50[.]0"`

### Constraints:

- The given `address` is a valid IPv4 address.
