

## 35. Search Insert Position

Easy  3618  297  Add to List  Share

---

Given a sorted array of distinct integers and a target value, return the index if the target is found. If not, return the index where it would be if it were inserted in order.

You must write an algorithm with  $O(\log n)$  runtime complexity.

### Example 1:

**Input:** nums = [1,3,5,6], target = 5

**Output:** 2

### Example 2:

**Input:** nums = [1,3,5,6], target = 2

**Output:** 1

### Example 3:

**Input:** nums = [1,3,5,6], target = 7

**Output:** 4

### Example 4:

**Input:** nums = [1,3,5,6], target = 0

**Output:** 0

### Example 5:

**Input:** nums = [1], target = 0

**Output:** 0

## Constraints:

- $1 \leq \text{nums.length} \leq 10^4$
- $-10^4 \leq \text{nums}[i] \leq 10^4$
- `nums` contains **distinct** values sorted in **ascending** order.
- $-10^4 \leq \text{target} \leq 10^4$
