Drumpf for President!

Problem Code: **STUDVOTE**

Submit

Read problems statements in [Mandarin Chinese](#), [Russian](#) and [Vietnamese](#) as well.

Donald Drumpf has spent the entire summer lobbying to gather votes for the upcoming student government election. At his University, there are a total of **N** students. Each student in the university casts a vote. The size of student government is determined by the number of students that get at least **K** votes.

Each person that receives at least **K** votes is given a post in the student government. The Dean noticed that every year, there are a few students who vote for themselves. He decided to add a rule to disqualify any such individuals who vote for themselves i.e they cannot be part of the student government.

You are given an array **A**, where **A_i** denotes the person who the i-th person voted for. Can you compute the size of the student government?

Input

The first line of the input contains an integer **T** denoting the number of test cases. The description of **T** test cases follows.

For each test case, first line consists of two space separated integers **N**, **K**.

Second line consists of **N** space separated integers denoting the array **A**, where i-th integer denotes **A_i**.

Output

For each test case, output a single line containing an integer corresponding to the size of the student government.

Constraints

- $1 \leq T \leq 100$
- $1 \leq K \leq N$
- $1 \leq A_i \leq N$

Subtasks

Subtask #1: (30 points)

- $1 \leq N \leq 3$

Subtask #2: (70 points)

- $1 \leq N \leq 100$

Example

Input :

```
2
3 2
2 1 2
2 1
1 2
```

Output :

```
1
0
```

Explanation

In **first test case**, there are **3** students. A student must receive at least **2** votes to be part of the student government. Student **1** votes for student **2**, student **2** votes for student **1** and student **3** votes for student **2**. Thus, Student **2** receives **2** votes and is the only one eligible for student government.

In **second test case**, although both students receive the required amount of votes, they are both disqualified as they had voted for themselves. Thus, size of the student government is **0**.

All submissions for this problem are available.

CodeChef - A Platform for Aspiring Programmers

CodeChef was created as a platform to help programmers make it big in the world of **algorithms**, **computer programming**, and **programming contests**. At CodeChef we work hard to revive the geek in you by hosting a **programming contest** at the start of the month and two smaller programming challenges at the middle and end of the month. We also aim to have training sessions and discussions related to **algorithms**, **binary search**, technicalities like **array size** and the likes. Apart from providing a platform for **programming competitions**, CodeChef also has various algorithm tutorials and forum discussions to help those who are new to the world of **computer programming**.

Practice Section - A Place to hone your 'Computer Programming Skills'

Try your hand at one of our many practice problems and submit your solution in the language of your choice. Our **programming contest** judge accepts solutions in over 55+ programming languages. Preparing for coding contests were never this much fun! Receive points, and move up through the CodeChef ranks. Use our practice section to better prepare yourself for the multiple **programming challenges** that take place through-out the month on CodeChef.

Compete - Monthly Programming Contests, Cook-off and Lunchtime

Here is where you can show off your **computer programming skills**. Take part in our 10 days long monthly coding contest and the shorter format Cook-off and Lunchtime **coding contests**. Put yourself up for recognition and win great prizes. Our **programming contests** have prizes worth up to INR 20,000 (for Indian Community), \$700 (for Global Community) and lots more CodeChef goodies up for grabs.
