Given a string `s` consists of some words separated by spaces, return *the length of the last word in the string. If the last word does not exist, return 0*.

A **word** is a maximal substring consisting of non-space characters only.

Example 1:

Input: `s = "Hello World"`

Output: 5

Example 2:

Input: `s = " "`

Output: 0

Constraints:

- `1 <= s.length <= 104`
- `s` consists of only English letters and spaces ' '.
